

Sicon Fixed Assets for Sage 200

Chipping Campden School (www.chippingcampden.gloucs.sch.uk)

Chipping Campden School are now a Co Ed Academy having changed status on the 1st August 2011. The school includes a 6th form and 1130 pupils. Since becoming academy status there was a requirement for an assets register which wasn't needed as a foundation school, and Steve Donnachie wanted an integrated solution rather than a manual system.

Sicon Fixed Assets was recommended by GCC innova as a suggested solution.

Key Features include:

- An integrated module within Sage, which provides for simple and quick postings of depreciation.
- The ability to store all relevant documentation and information within the module
- Depreciation Forecasts can be generated simply and quickly
- Links to purchase ledger
- Reports can be produced to show all maintenance costs against each asset

Typical Project Costs:

Software – Fixed Assets Module at £795 and maintenance at £450 each per annum
Typical Installation, set-up and training at 1/2 day (all can be completed remotely)

Steve Donnachie,
Business Manager at the
academy comments
"That the system is going
well, it's marvellous ! It's
doing exactly what we
need it to do, and
provides management
information we need with
a simple interface linking
directly into Sage"
